## Chess Tournament of AIU

10 Minutes

30 Minutes

# About what?

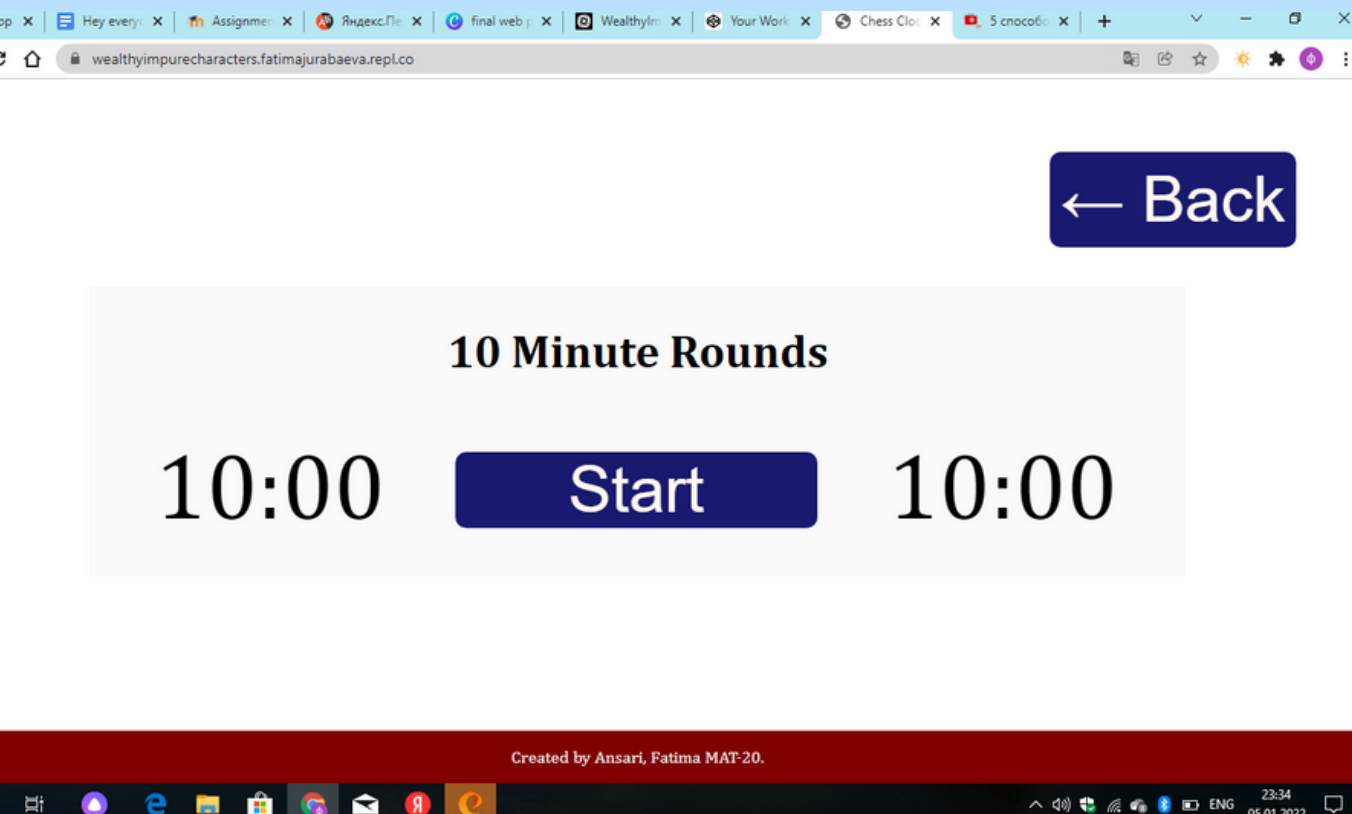

02

**we have created this program for chess players. This application can be used instead of special watches that are needed at competitions.**

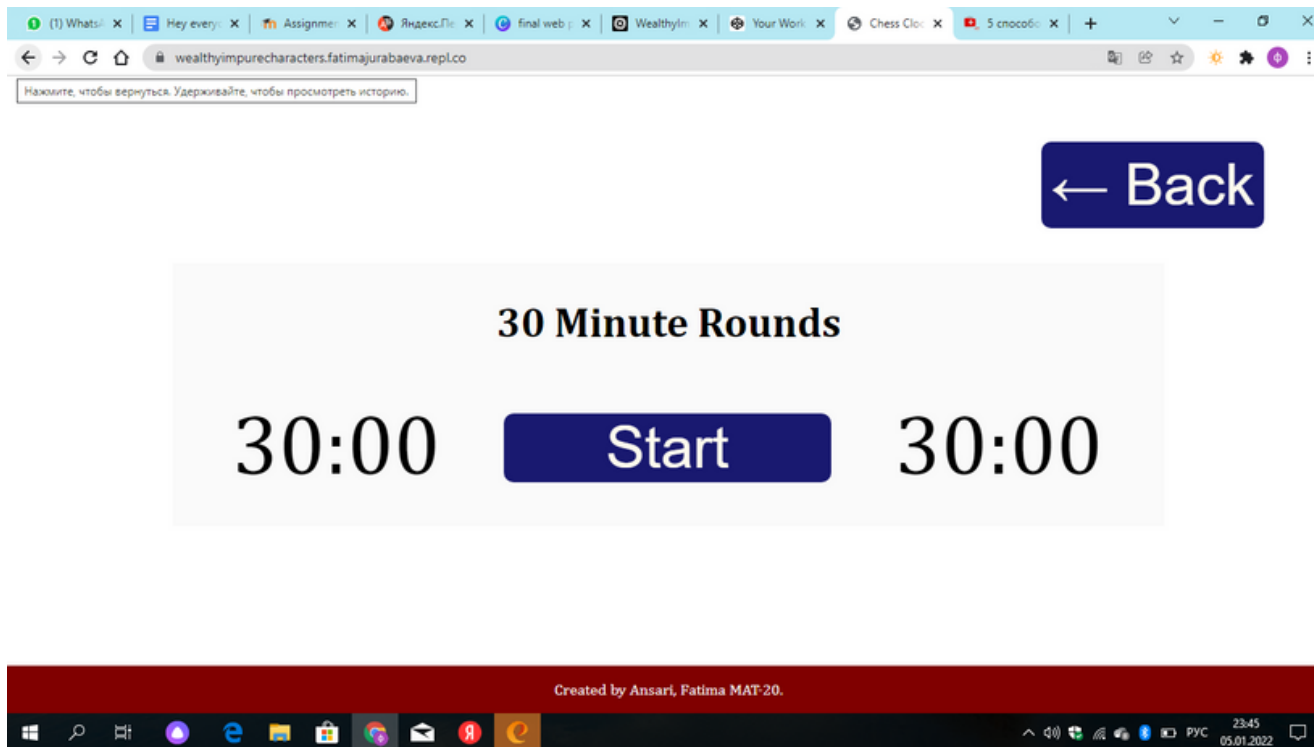

# How it works?

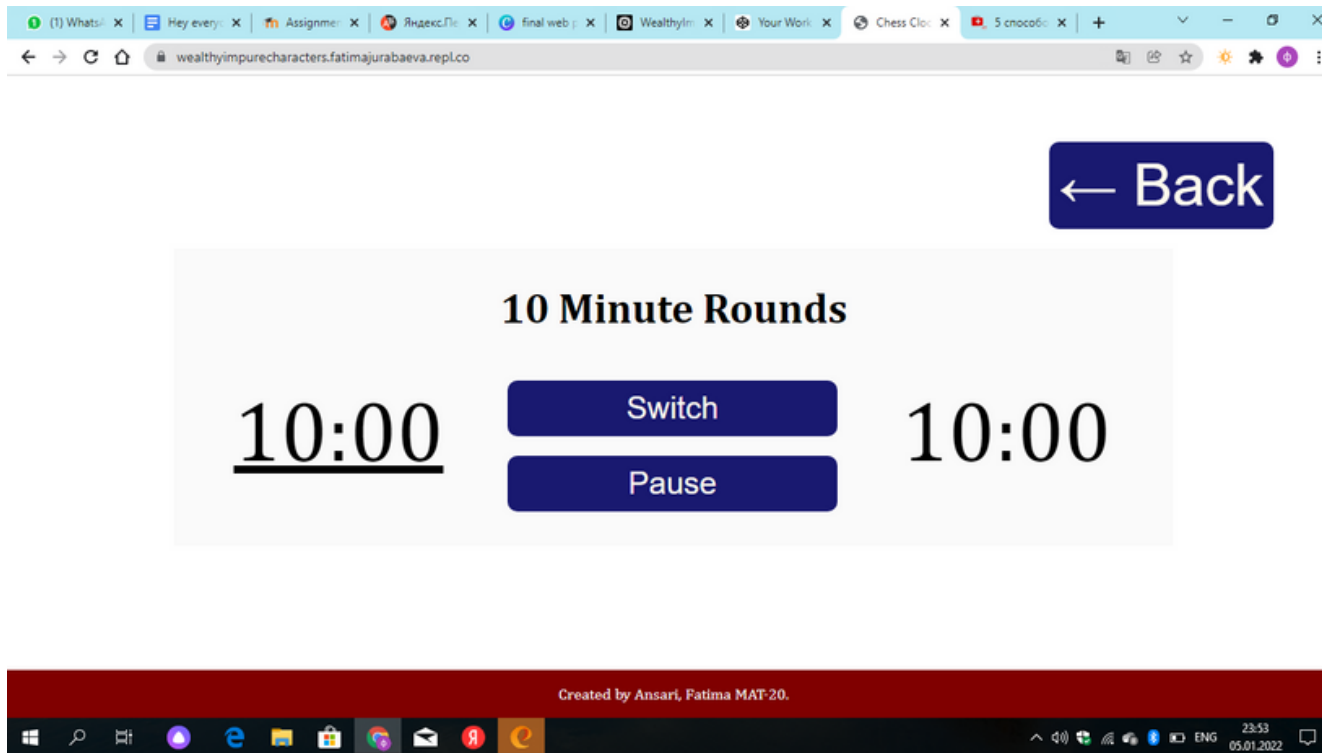

when we press the 10 minutes button, this screen opens, where there are also start and back buttons. Here each player has 10 minutes during which he must play, and after the time has elapsed, if the game is not completed, the player loses

# continue of the previous page...

In this page the only difference is on the time, which is equal to 30 minutes. With button start players can start the game and back button return to the main menu

# After clicking start:

There are two buttons: switch and Pause. switch is used to pass the turn queue to another player and pause stops the game until the resume button is pressed

**Thanks for  
watching**  
( if you want more  
details about the  
code, please watch  
our video  
explanation or  
tutorial)
